James Webb Space Telescope (JWST) Mission Briefing

The James Webb Space Telescope (JWST) was launched on December 25, 2021, aboard an Ariane 5 rocket fr

It operates in a halo orbit around the Sun-Earth Lagrange point 2 (L2), approximately 1.5 million kilometers (930

The primary mirror consists of 18 hexagonal gold-plated beryllium segments, creating a combined aperture of 6

Primary instruments include NIRCam, NIRSpec, MIRI, and FGS/NIRISS.

The five-layer Kapton sunshield provides passive cooling down to 40 Kelvin (-233 Celsius).

Total mission cost for NASA is estimated at approximately billion over its operational lifetime.
